

Inspection

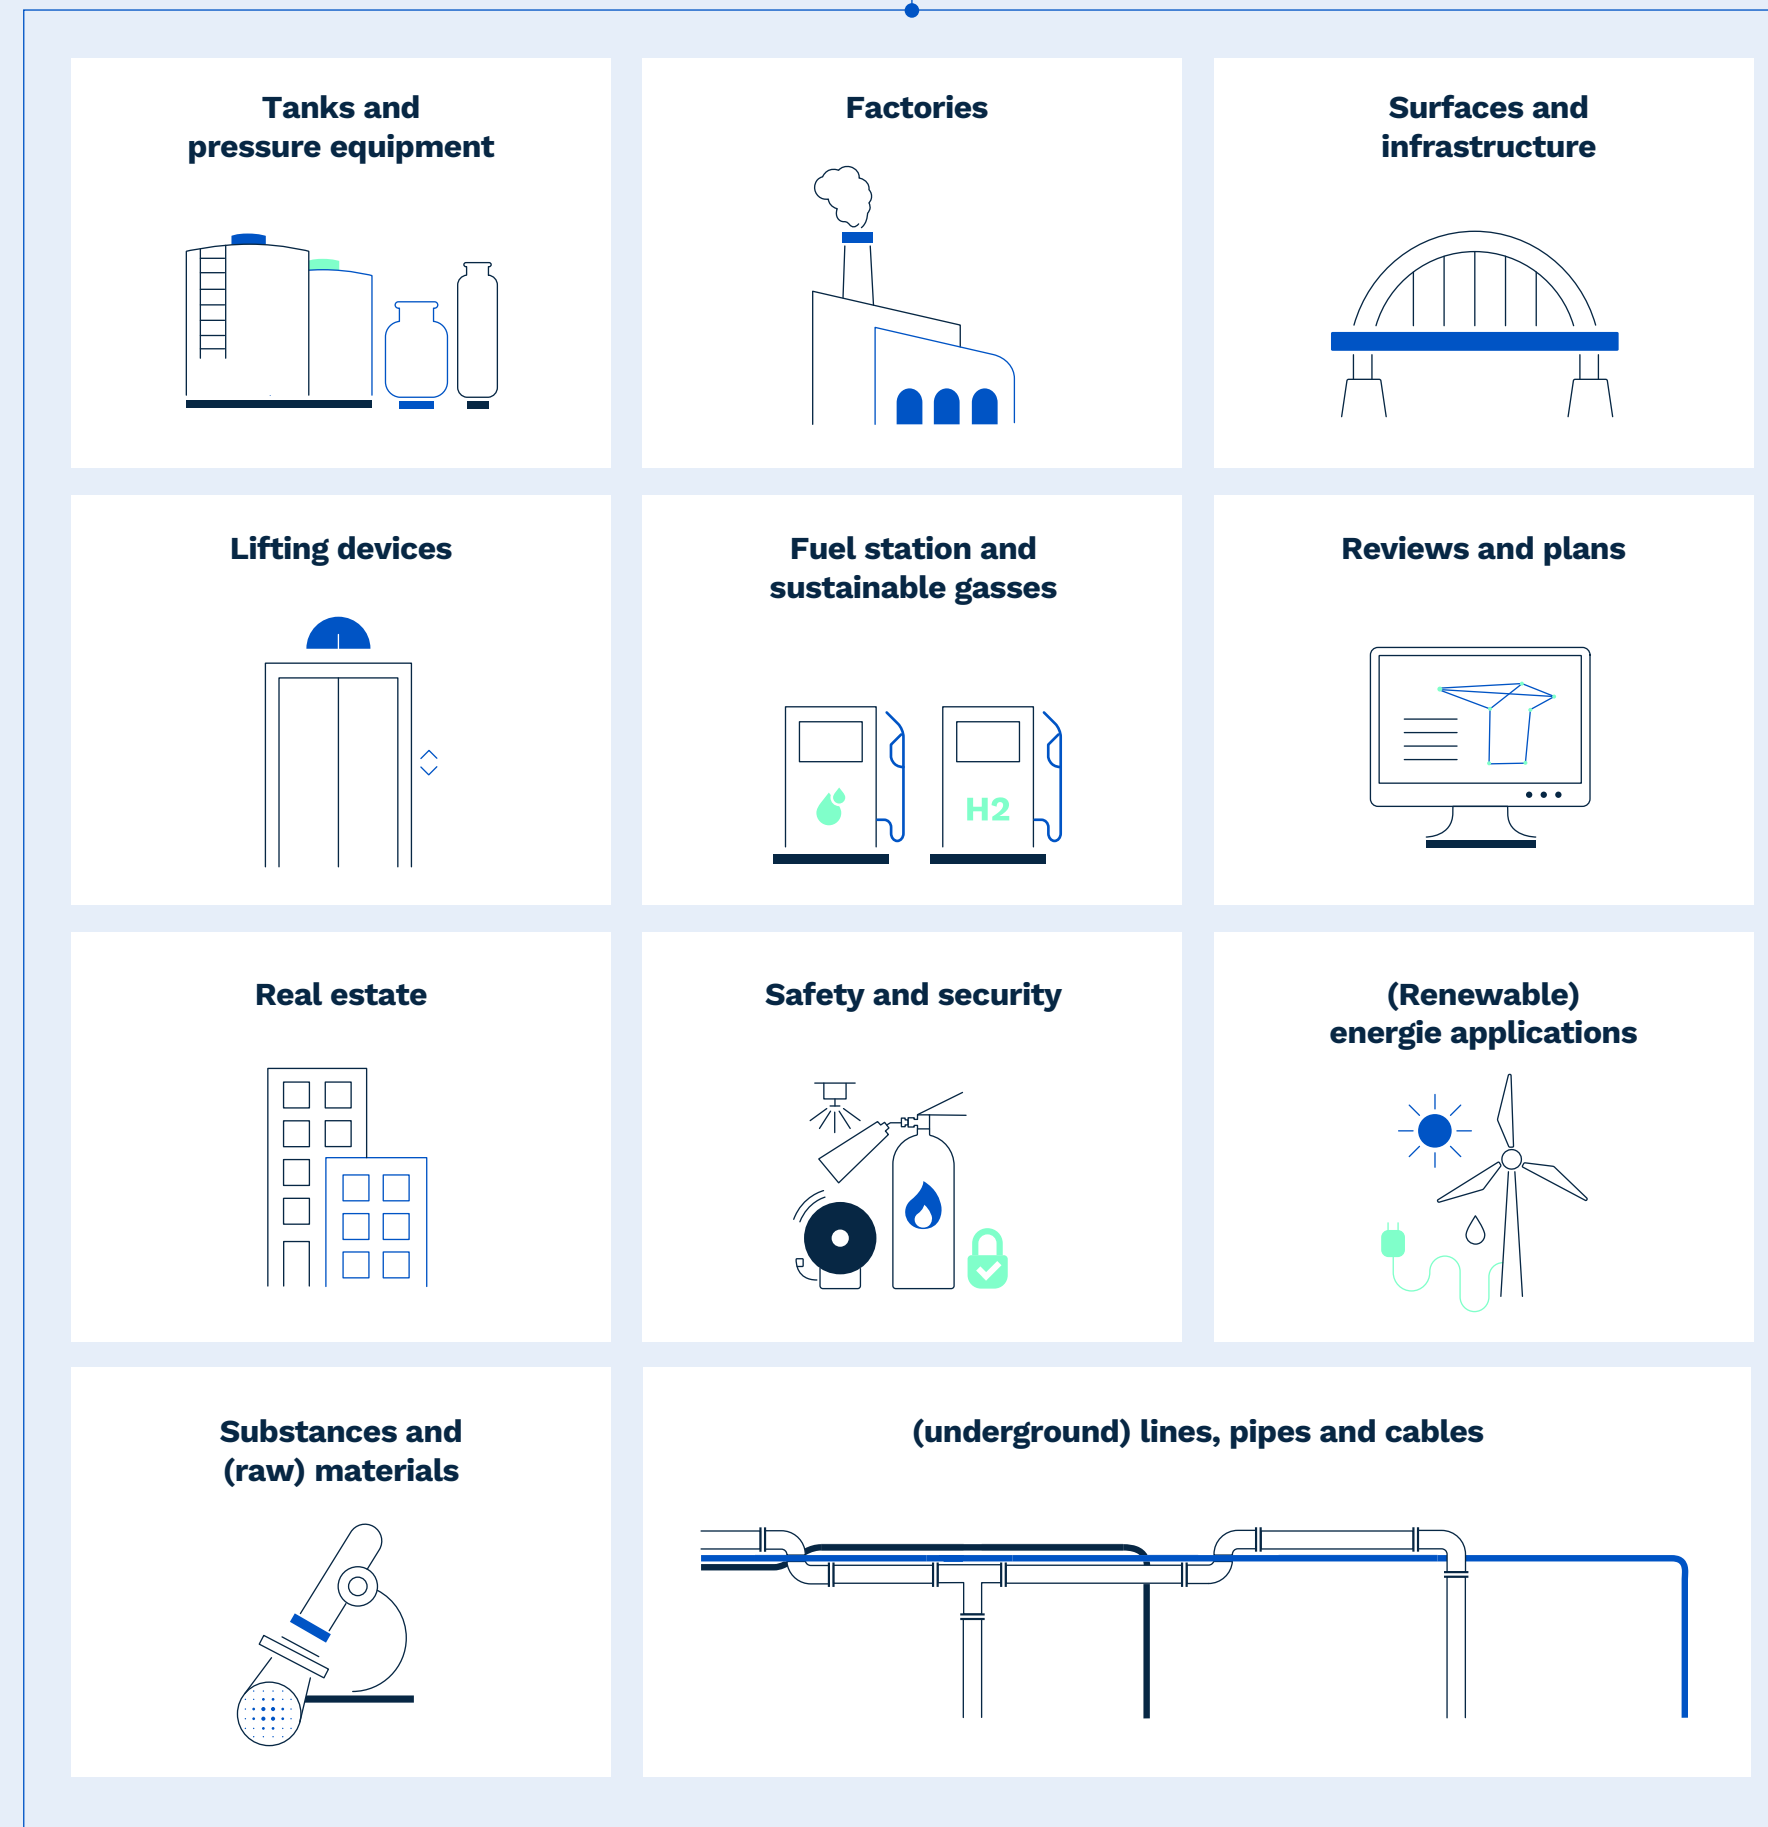

You manufacture products, execute projects, work according to certain processes. How do you make sure they meet the relevant quality standards, requirements and legal obligations? Inspection can help you reduce risks, control quality, verify quantity and meet regulatory requirements. It makes the invisible visible!

In all inspections, we act as a strictly independent third party. We are also being regularly 'inspected' ourselves by national and European accreditation institutions. Kiwa is a Notified Body (NoBo) for many European directives: we are authorized by a national accreditation body to perform inspections in compliance with international standards.

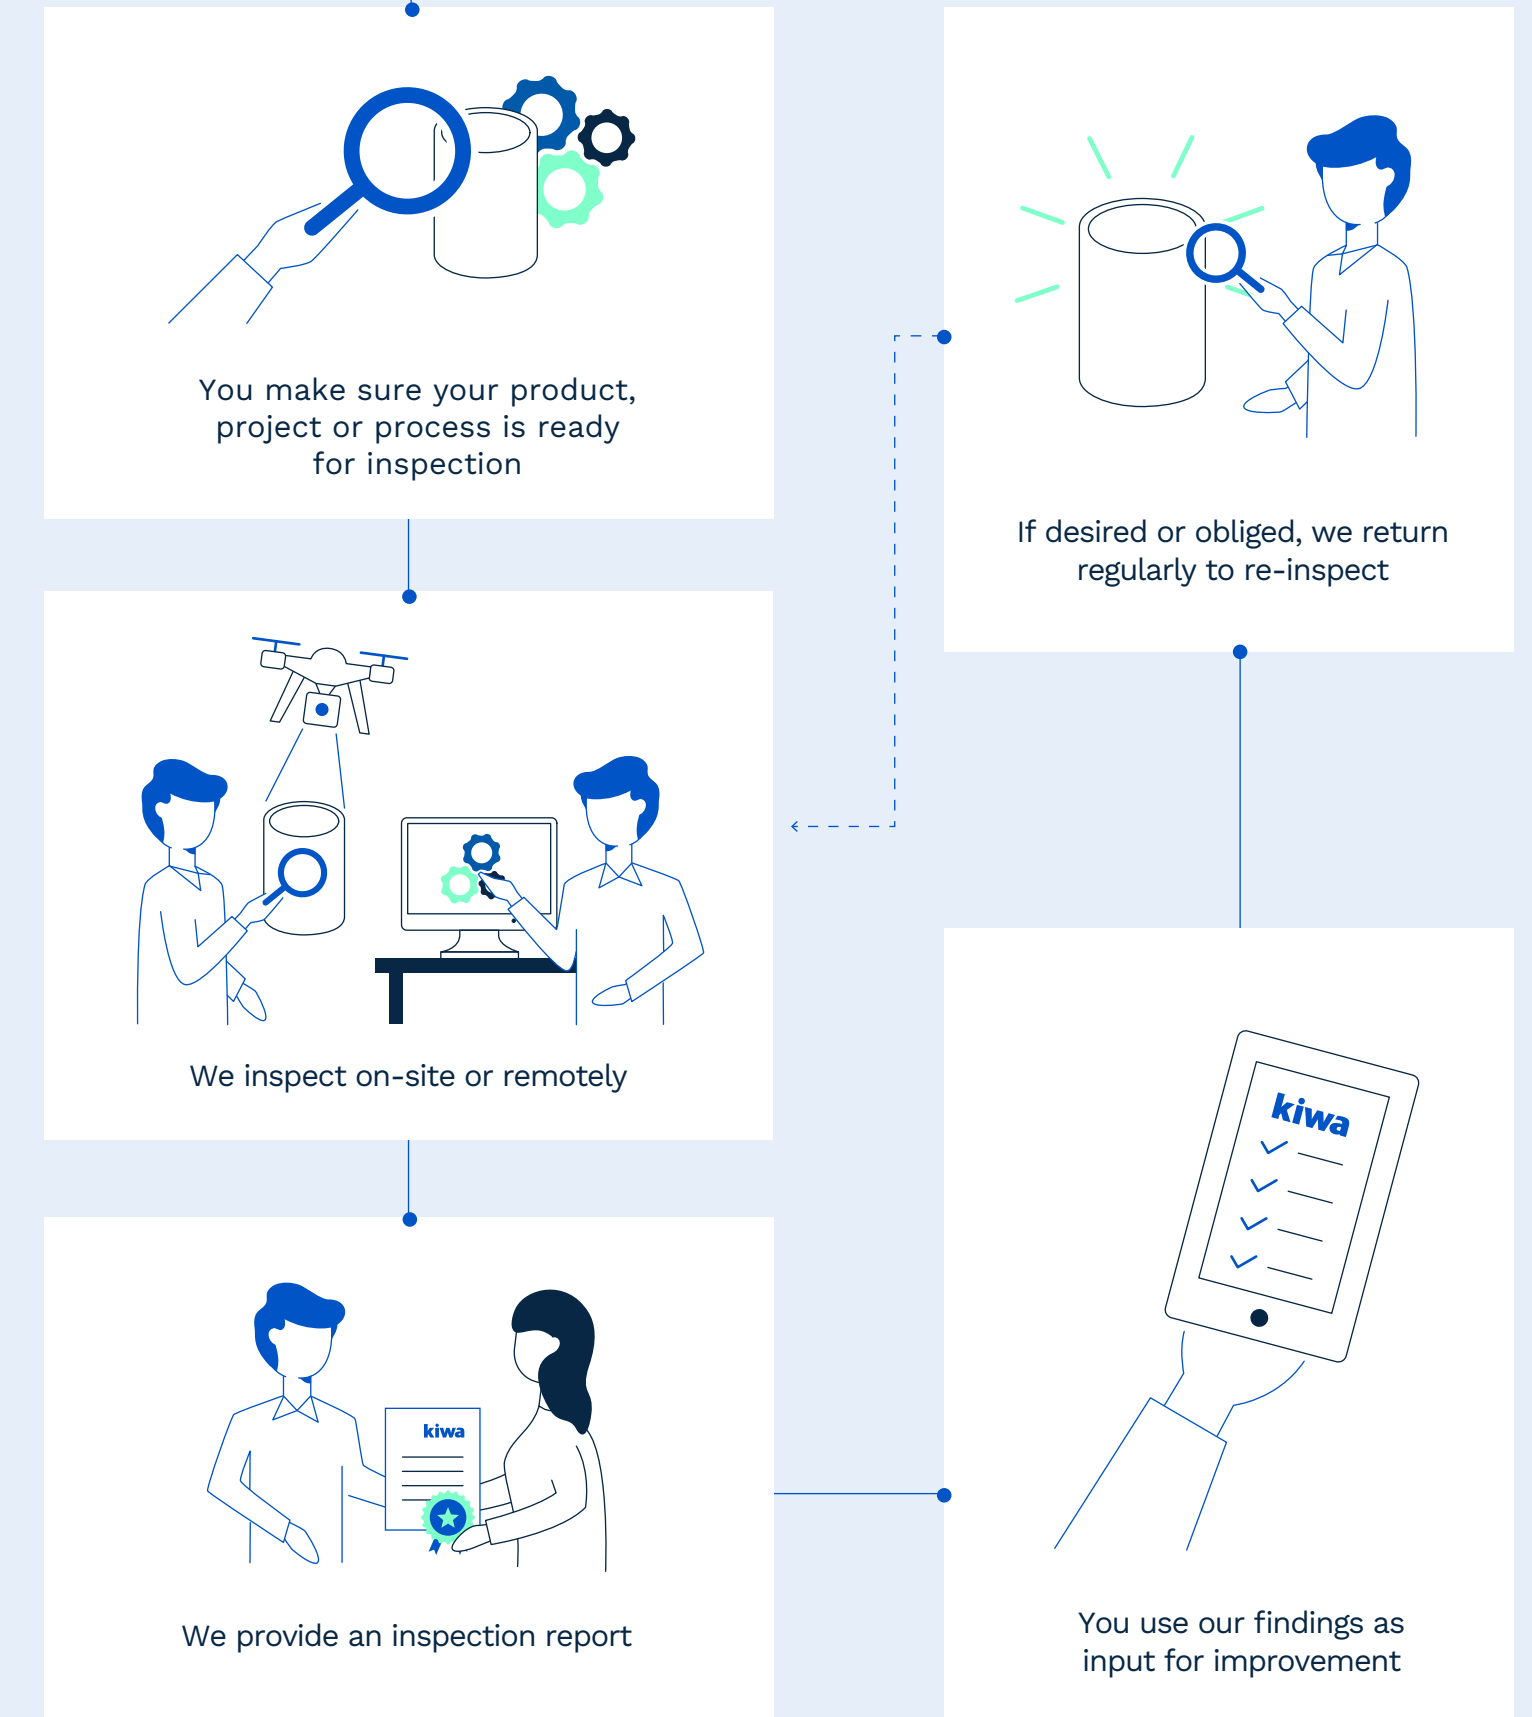

What inspection is

Inspection includes all kinds of examination, measurement, gauging, and comparison. We inspect practically powerful pressure vessels, and from design review to maintenance plan. Thus, we determine the condition of a certain material or item, a process or a situation, and whether or not it conforms to requirements, regulations and standards.

Some examples of what we inspect

The process

Inspection

✓ Improves efficiency

👤 Brings confidence

🛡️ Improves reliability and safety

👍 Improves customer satisfaction

⚠️ Reduces risk

🏆 Safeguards your reputation

❤️ Prevents disputes
